SKILLS

Certifications: CompTIA CySA+, Server+, Security+, Network+, Microsoft SC-500 & SC-200, Google Cybersecurity, IT Support, EC-Council Information Security Analyst, AWS Cloud Support Associate
Security Operations: Detection engineering, false-positive tuning, SIEM (Splunk), log analysis, incident response, threat-intelligence feeds, MITRE ATT&CK, IAM attacks, Entra ID, AWS CloudTrail Analysis, KQL, OAuth App Attacks
Languages & Platforms: Java, Python, Bash, SQL, C++, SourcePawn, HTML/CSS, JavaScript, SQLite, MySQL, Linux, Windows Server, Active Directory, VirtualBox, Proxmox, pfSense, Cloudflare, Git, Azure, AWS (IAM, EC2), Defender for Cloud, Microsoft Sentinel, Defender XDR, EDR, DNS/DHCP

PROJECTS

Minecraft Forge Mods Packet Scanning | *Vulnerability Research* **Aug. 2026 - Present**
- Decompiled 400+ Forge mods with Vineflower & CFR, identifying server-bound packet handlers with no permission gate (CWE-862), deployed within modpacks with **30M+** downloads in CurseForge and other platforms.
- Identified 64 mods and 211 total ungated packets, built a custom client-side mod (C2S) to test each one by creating a GUI with tooltips and modules that weaponizes the ungated packets to test its impact, & documented all findings.
- Graded findings by severity, wrote suggested patches, and disclosed privately to maintainers before publishing.

CSGO SourcePawn Plugin Suite | *14 Repositories, ~30,000 Lines* **Sep. 2024 - Present**
- Built a server-side anti-cheat with ~45 behavioral detectors in 7,400 lines of SourcePawn plus an 800-line C++ Metamod extension, tuning thresholds and a manual review process to analyze audit logs for false positives.
- Developed a VPN and proxy blocker that loads CIDR threat-intelligence feeds into memory, then enriches misses against reputation APIs with SQL caching to stay inside rate limits and skip duplicate lookups.
- Created two new movement-based gamemodes from scratch and added new features or fixes to forked plugins.

Pi-Hole with Raspberry Pi **Sep. 2025 - Present**
- Deployed Pi-hole on a Raspberry Pi Zero 2 W as a network-wide DNS sinkhole covering both IPv4 and IPv6.
- Served DHCP so every lease sets the Pi as resolver, and profiled beaconing endpoints from the query log.

Cybersecurity Home Lab **Aug. 2025 - Present**
- Built an isolated VirtualBox lab (Kali attacker, Windows 10 target) forwarding Windows Event Logs into Splunk.
- Wrote SPL threshold detections for brute-force logons (Event ID 4625) and closed gaps in stealth-scan logging.

WORK EXPERIENCE

Financial Aid Student Assistant | *Coastline College* **Apr. 2025 - Present**
- Handled sensitive departmental PII in Microsoft Access/Excel under FERPA and data-privacy standards.
- Managed PII-bearing scholarship projects in Blackbaud with Coastline Foundations department.
- Digitized & secured 25,000+ financial records using Ellucian, Microsoft Office, and Google Workspace.

Founder | *Polars LLC* **Oct. 2021 - Sep. 2023**
- Deployed a company site with IAM policies, OAuth 2.0, OpenID, SSO and 2FA aligned to OWASP ASVS.
- Configured PCI-compliant payments (Stripe, Coinbase Commerce API) to protect customer PII and prevent fraud.
- Led a small support team to resolve 2,500+ technical support tickets through Zendesk with escalation workflow.

EDUCATION

Coastline College **Exp: Jun. 2027**
Associate of Science in Cybersecurity GPA: 3.54
Relevant Coursework: Cybersecurity Analyst, Network Security, Contemporary OS, Computer Networking Principles, Intro to Cybersecurity, Python Programming 1, C++ Programming 1
